

Sec 2.5 Geometry – Congruence

Name: _____

Any two congruent figures can be mapped onto one another using a series of rigid or isometric transformation (reflections, rotations, and translations). – See GSP Lab (Transformations) –

Each of the following pairs of figures shown below are congruent. Write a congruence statement for each and tell whether or not a reflection would be needed to map the pre-image onto the image.

Given the following congruencies find the requested unknown angle.

5. $\triangle ABC \cong \triangle ONM$

6. $\triangle GEM \cong \triangle TOR$

Given the following congruencies find the requested unknown side.

7. $\triangle TRI \cong \triangle ANG$

$GN =$

8. $\triangle MTH \cong \triangle FUN$

$UF =$

The following pairs of triangles are congruent. Provide a suggested transformation or series of transformations that can map one triangle onto the other congruent triangle. (In each diagram $\triangle ABC \cong \triangle DEF$)

9.

Circle which transformation(s) could be used to map $\triangle ABC$ onto $\triangle DEF$.

Translation	Reflection
Rotation	Dilation

10.

Circle which transformation(s) could be used to map $\triangle ABC$ onto $\triangle DEF$.

Translation	Reflection
Rotation	Dilation

11.

Circle which transformation(s) could be used to map $\triangle ABC$ onto $\triangle DEF$.

Translation	Reflection
Rotation	Dilation

12.

Circle which transformation(s) could be used to map $\triangle ABC$ onto $\triangle DEF$.

Translation	Reflection
Rotation	Dilation

Angle Puzzles. (angles are not drawn to scale)

9. Find $m\angle BCE$

Given:

- \overrightarrow{AC} bisects $\angle DAB$
- $m\angle DAB = 50^\circ$
- $\angle ABC$ is a right angle

$m\angle BCE =$

10. Find $m\angle GFH$

Given:

- \overrightarrow{GH} bisects $\angle FGI$
- $m\angle FGI = 60^\circ$
- $m\angle GIH = 75^\circ$
- $\angle FHI$ is a right angle

$m\angle GFH =$
